\* In suburban/rural areas, landlord representation rates may be lower, but there is extremely limited data available for such areas at this time.

\*\* Where a jurisdiction has enacted a right to counsel, this chart includes pre-enactment statistics where available in order to reflect the national reality absent such an intervention. This chart also does not include statistics from jurisdictions where representation has been significantly increased through other types of special interventions, such as D.C.'s Expanding Access to Justice Act.
